

toolstar®test WIN on USB flash drive

Press commentary

"... in the professional segment, is such a professional solution, a must-have. With this diagnostic-tools, you can find even difficult errors. Easy once are found faster..."
 ChannelPartner, opinion of the editor

"Over an eight hour day long, you can save up to 72 minutes per workplace."
 IT-Business - credentials Geodis

"The toolstar®KIT is an extensive collection, which can be used even at dead PCs. The contained tools cover all possible application areas optimal and complement one another."
 c't - „very good“

"The use of software-based diagnosis relieved technicians, shortening lead times and increasing the quality of error finding. So the costs are reduced, at the same time, the conversion increases."
 Technical Director, Expert Bening

"... Because your software has become an integral part of my Computer Services, a great thing."
 Point of Service

"The test results are excellent I want to allow myself and on behalf of my colleagues, to congratulate..."
 Quality assurance, Geodis Germany GmbH

Extensions (for port- and drive-tests)

Test plug and test media for toolstar®test WIN/LX/analyser

toolstar®techpack

bidirectional test plug + Test-CD + DVD

- Test plug serial COM for bidirectional port tests
- Check quality of data transmitting
- Test CD + test DVD for optimal reading tests

toolstar®test WIN

Professional hardware diagnosis under Windows

- Tests all important components of the PC within its normal working environment
- Servertests without reboot
- No installation required
- All tests run in the background
- All tests sequences simultaneously for high strain
- Detailed system overview including a complete driver list

toolstar®test WIN is ideally suited to provide accurate analysis of your Windows operating system. It integrates not only hardware tests, but also many analysis functions. Because many errors occur only intermittently or the PC hangs at random intervals, toolstar®test WIN offers furthermore the possibility to perform burn-in tests in unique combinations. The consequences are hours of search and long lasting down times. By the use of burn-in tests the system can be tested thoroughly. Like toolstar®test LX toolstar®test WIN is being updated constantly.

Your advantage with toolstar®test WIN

- Tests your PC/server the way your customer uses it
- Servertests without reboot
- No installation required
- All tests run in the background while your customer can work
- Enormous time savings in case of intermittent errors
- Test random number of components at the same time
- Notification of errors via eMail
- Detailed tests reports for your validation
- No unnecessary changing of components
- No more „trial and error“

Overview of tests:

Seven memory tests, memory speed, simultaneous tests for up to 256 CPUs (individual is also possible), graphics, graphics 3D and graphics memory test, ports (serial, parallel, USB) with optional plugs, different read and speed tests for hard disks, tests for CD-, DVD- and USB-drives, ping, sound, input units, and much more. All tests can be run in any combination at the same time for extreme high strain.

Remarkable detailed system information. CPU, mainboard, BIOS, drives, network drives, graphic, chipset and PCI-details, memory, display, multimedia, ports, printer, battery status and energy settings, extensive driver lists, serial number, Microsoft® product-ID and product key of the operating system and office, and a lot more.
